

ACCOUNTS RECEIVABLE ACCELERATOR

Accounts Receivable automation accelerates efficiency and reduces outstanding payments, bringing direct returns on investment to the enterprise cashflow and profitability.

linking you. simply

HOW

The Accounts Receivable department is the soul of the enterprise's cashflow. As a result, the department is under increasing pressure to provide accelerated and efficient collections processes whilst maintaining a lean team. Many hours are spent searching, matching, resending and chasing documents which may have already been distributed in the automated document run.

With an electronic document linking solution that automates document delivery, response, archiving and reporting, there is immediate access, response and interaction with documentation, removing the need for archaic and expensive portals, helpdesks or workflow environments that can degrade and frustrate customer experience.

Links statements, invoices, POD's, customer PO's, contracts

Customer's accounts payable's life made easier

Statement = personalised customer portal

All relevant information at the click of the button

Leverage existing systems and architecture

No Capex, no change to UI, no change to standards or architecture

LINUXUS
Accelerator

A **simpler, easier** and **faster** way to implement smart document delivery and access in the Accounts Receivable process.

According to Aberdeen Group in 2016, the number of employees required to process accounts receivable functions more than halved in organisations where an automated Accounts Receivable process was implemented.

SOLUTION

By automatically linking invoices and statements to purchase orders and proofs of delivery, the enterprise is able to dramatically improve process time, reduce process complexity and improve visibility into financial information – directly influencing the enterprise cashflow. The direct financial return on investment is enhanced by improved stakeholder engagement, improved productivity and peace of mind in compliance and governance procedures. The enterprise is able to leverage off existing IT infrastructure investment by moving it in a cloud environment or on-premise.

Automates the delivery of documents

Links all documentation together

Creates a direct channel of communication

Workflows documents between processes

Integrates with your ERP systems (for example SAP) and current infrastructure

BENEFITS

Reduce overdue debt and debtors days by up to 40% - A listed company dropped overdue debt by R90 million over 12 months.

Less time is wasted producing duplicate documentation resulting in efficiency in collections. Transparency and efficiency results in improved collections and positive cashflow.

Save time by 60% through linking AR documents and providing automatic availability to stakeholders – A large IT company repurposed two finance team positions

Automated and any-time access delivers the correct information directly from the statement, dramatically improving productivity within the AR team.

Eliminate manual invoice and statement distribution – Invoices and statements are electronically delivered directly to the customer

The automated electronic distribution of documents in the AR department, with enriched linking, brings customers closer and allows anytime interaction, without clogging call centres, lengthy interactions or wasted time searching for incorrect information.

Obliterate risk of lost documents or undelivered invoices or statements of accounts - No need for expensive call centre or complicated portal implementation and maintenance

Call volumes are drastically reduced and engagement improves. Accurate information and documentation is made available without delays and frustration.

Increase process integrity and provide comprehensive data reporting – Provides accurate financial reporting information available for reporting

Increase flexibility and efficiency through comprehensive processes and system workflows that come together in a data warehouse that provides the data you need when you need it most.

Linxus Accelerator can be applied simply to multiple scenarios, industries and sectors where automated document delivery and workflow can improve productivity and engagement levels.
